## SUMMARY

AI & software engineer with 3+ years of experience building cloud-native applications, data pipelines, and automation workflows across GCP, AWS, and modern JavaScript & Python ecosystems.

## PROFESSIONAL EXPERIENCE

### Deutsche Bank AG

#### Thesis student

- Designed an agentic-AI-driven automation framework for corporate action processing on Google Cloud.
- Built a proof-of-concept system by engineering BigQuery pipelines and prototyping autonomous workflows using Vertex AI.

Jul 2025 – Sep 2025  
Frankfurt

#### Intern - TDI

- Completed the DB Cloud Developer sprint with hands-on development in GCP services.
- Supported production teams by debugging Python-based internal data-processing tools, improving system reliability.

Jan 2025 – May 2025  
Frankfurt

### Zoomifier Corporation

#### Software Developer

- Migrated a legacy PHP CRM into a Vue.js component-based architecture, improving maintainability and user experience.
- Built event-driven AWS Lambda functions to process asynchronous API requests, reducing latency and enhancing scalability.
- Implemented multi-step automation workflows using Zapier to sync CRM data with multiple SaaS tools, cutting manual operations.
- Optimized API data-fetching logic, contributing to ~20% faster load times.

Nov 2021 – Feb 2024  
India

### Maverick Labs

#### Software Development Engineer

- Contributed to a JavaScript-based web application in an agile environment using Git and YouTrack.
- Developed and maintained Jest unit tests for UI components and utilities, improving code quality and stability.

Jun 2021 – Aug 2021  
India

#### Software Development Intern

- Identified and resolved bugs in production code, gaining early experience in debugging, code reviews, and release cycles.

Dec 2020 – May 2021  
India

## EDUCATION

### Hochschule Hof

M.Sc. Artificial Intelligence and Robotics

Mar 2024 – present  
Germany

### Savitribai Phule Pune University

M.Sc. Computer Science

Jun 2019 – May 2021  
India

## PROJECTS

### E-Commerce performance & customer analytics platform

- Built a cloud data warehouse in BigQuery by processing and integrating 9 raw datasets (orders, payments, reviews).
- Delivered business insights through dashboards highlighting product performance, customer locations, and delivery-review correlations.

Oct 2024 – Feb 2025

|                                                                                                                                                                                                                                                                                                                                                                      |                     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Automated object detection, color sorting with YOLOv7 and Dobot arm</b> <ul style="list-style-type: none"><li>Implemented real-time color detection using YOLOv7 + OpenCV to control conveyor operations and robotic sorting.</li><li>Added a WhatsApp-based alert system (Pywhatkit) to notify users with images when objects had unrecognized colors.</li></ul> | Oct 2024 – Feb 2025 |
| <b>Healthcare analytics: Predicting patient readmission risk</b> <ul style="list-style-type: none"><li>Pre-processed complex tabular datasets and engineered features from ICD-9 medical codes.</li><li>Built a classification model to predict 30-day readmission risk, enabling early flagging of high-risk patients.</li></ul>                                    | Mar 2024 – Aug 2024 |

SKILLS

---

**Frontend & Web Development** — FastAPI, Vue.js, Component-based architecture, Vuex  
**Cloud** — AWS (Lambda, S3), GCP (BigQuery, Cloud Functions)  
**Data & ML** — Data pipelines, MLP models, YOLOv7, Feature engineering  
**Tools** — Git, YouTrack

LANGUAGES

---

**English** — C1 level | **German** — B1 level
